

Source Code:

```
// Function to perform multiplication
function multiply(num1, num2) {
    return num1 * num2;
}

// Function to perform division
function divide(num1, num2) {
    if (num2 === 0) {
        return "Error: Division by zero is not allowed.";
    }
    return num1 / num2;
}

// Example usage
let number1 = 10;
let number2 = 5;

let resultMultiplication = multiply(number1, number2);
let resultDivision = divide(number1, number2);

console.log("Multiplication of " + number1 + " and " + number2 + " is: " + resultMultiplication);
console.log("Division of " + number1 + " by " + number2 + " is: " + resultDivision);
```

Output:

Multiplication of 10 and 5 is: 50

Division of 10 by 5 is: 2
